PROFESSIONAL EXPERIENCE

Azion <i>Software Engineer II (Rust)</i>	Remote Apr 2026 – Present
- Developing high-performance Rust systems for edge computing and CDN workloads. - Working with the application and security team to improve platform performance, reliability, and operational safety. - Building distributed computing components focused on low-latency execution and scalable edge infrastructure.	
CamelSec <i>Chief Technology Officer (CTO)</i>	Remote Apr 2025 – Dec 2025
- Architected fully reproducible infrastructure using NixOS, reducing deployment drift to near-zero across 10+ machines. - Designed zero-trust internal networks using WireGuard with granular ACL policies for secure client data isolation. - Led monthly pentesting engagements for enterprise clients (Sapere, SIT, FAMMA), identifying critical vulnerabilities in under 5 hours per assessment on average. - Implemented automated ISO 27001 compliance validation, ensuring continuous security posture alignment. - Deployed redundant staging environments with strict data segregation for sensitive client workloads.	
MW APP IT Consulting <i>Full Stack Developer</i>	São Paulo, SP Jan 2021 – Apr 2025
- Built and maintained production full-stack applications using React/TypeScript, .NET/C#, and Python/FastAPI for high-traffic enterprise clients. - Optimized database query performance by up to 2.43x across MS SQL, MySQL, and SQLite, improving response times for thousands of concurrent users. - Led small engineering teams delivering software for CESP, Hunter Douglas, and CETESB, consistently meeting tight deadlines and budget constraints. - Shipped production-grade features across 4+ years, contributing to successful launches of multiple high-traffic systems.	

TECHNICAL SKILLS

Languages: Rust, Go, C/C++, Python, TypeScript, C#/.NET, Assembly (x86), SQL. Infrastructure & DevOps: Nix/NixOS, Docker, Kubernetes, GitHub Actions, WireGuard, Linux Hardening. Security: Network Penetration Testing, Red Teaming, ISO 27001 Compliance, Reverse Engineering. Tools & Frameworks: Git, FastAPI, NestJS, Drizzle/Prisma, Gin, Gorm, Rayon, Tokio, Actix, Axum. Database Systems: PostgreSQL, MySQL, SQLite, MS SQL Server.	
---	--

PROJECTS

High-Performance API (Rust / Docker)	GitHub
Scaled a REST API to 2,917 RPS with 0.5ms P50 latency using actix-web, nginx load balancing, and optimized SQLite with write-ahead logging and connection pooling.	
“One Billion Row Challenge” (Rust, HPC)	GitHub
Optimized data ingestion to process 1B rows in 1.8 seconds using rayon parallelism and memory-mapped I/O, achieving top-tier performance without hand-tuned SIMD.	
Nix Config Collection (NixOS, CI/CD)	GitHub
Managed 6+ machines (cloud + physical) over 7 months with declarative NixOS configs. Built hardened infrastructure including mail servers, DNS (AdGuard), and mesh VPNs.	
Educational x86-64 Kernel (Rust, x86 Assembly)	GitHub
Built a bootable kernel in Rust (no_std) with x86 assembly bootloader, protected mode switching, arena allocator, interrupt handling (IDT), and VGA text driver.	
Zero-Dependency RNN (Rust)	GitHub
Developed a recurrent neural network from scratch with manual memory tuning, exceeding PyTorch training speed by over 6000% on specific workloads.	

LEADERSHIP EXPERIENCE

EchoSec (Cybersecurity League) <i>President & Counselor</i>	São Paulo, SP Mar 2023 – Present
- Organized and led Capture The Flag (CTF) competitions, building practical offensive security skills across the community. - Mentored 20+ members in Linux fundamentals, binary exploitation, and red teaming methodologies.	

EDUCATION

INTELI (Institute of Technology and Leadership) <i>Bachelor of Computer Engineering</i>	São Paulo, SP Expected Dec 2026
Project-Based Learning with real-world corporate partners, delivering industry-grade solutions throughout coursework.
