Gustavo Widman

Rust Backend / Platform Engineer | Distributed Systems, Edge Infrastructure, Security
São Paulo, Brazil | gustavowidman@gmail.com | linkedin.com/in/gustavo-widman | github.com/GustavoWidman | guswid.com
Graduating Dec 2026; targeting Canada-based Rust backend/platform roles from Jan 2027.

PROFESSIONAL EXPERIENCE

Azion São Paulo, SP
Software Engineer II (Rust) Apr 2026 – Present
- Building **Rust** components for edge/CDN workloads where latency, memory use, and operational reliability shape the design.
- Working across application and security teams on performance-sensitive distributed systems and production debugging.
- Contributing to scalable edge components under tight CPU and memory budgets.

CamelSec Remote
Technical Lead, Security Infrastructure Apr 2025 – Dec 2025
- Led hands-on technical work for an early-stage cybersecurity consultancy across infrastructure, internal tools, and client security operations.
- Built reproducible **NixOS** environments across **10+ machines** and designed **WireGuard** networks with granular ACLs.
- Deployed isolated staging environments for client workloads and ran network/application security assessments for enterprise clients.

MW APP IT Consulting São Paulo, SP
Software Engineer Jan 2021 – Apr 2025
- Built and maintained production systems for **CESP**, **Hunter Douglas**, and **CETESB** across backend APIs, frontend UI, and SQL databases.
- Optimized SQL query paths by **up to 2.43x** across **MS SQL**, **MySQL**, and **SQLite**.
- Led small delivery teams coordinating implementation, review, deployment, and production fixes.

TECHNICAL SKILLS

- **Languages**: Rust, Go, C/C++, Python, TypeScript, C#/.NET, Assembly (x86/x86-64), SQL.
- **Backend & Platform**: Linux services, REST APIs, WebSockets, HTTPS, PostgreSQL, MySQL, SQLite, MS SQL, CI/CD.
- **Rust Stack**: Tokio, Axum, Actix, Rayon, `no_std`, memory-mapped I/O, async/concurrency, low-latency services.
- **Infrastructure & Security**: Nix/NixOS, Docker, Kubernetes, WireGuard, Linux hardening, pentesting, reverse engineering.

SELECTED PROJECTS

upstreamer (Rust reverse proxy) GitHub
- Built a reverse proxy in Rust with Kubernetes service discovery, hot config reload, active/passive health checks, rate limiting, and Prometheus metrics.
- Benchmarked **76,663 RPS** with **0.64ms p50** and **3.81ms p99.99** in the published setup.

FerriSync (Rust file synchronization thesis) Write-up
- Researching and prototyping an rsync-style synchronization engine for multi-gigabit networks, focused on rolling-hash bottlenecks, cache-aware lookup design, and multi-core delta computation.

NixOS Infrastructure (Nix, WireGuard, CI/CD) GitHub
- Managing **6+ machines** with declarative NixOS configs for reproducible deploys, hardened hosts, DNS/mail services, and mesh VPNs.

x86-64 Kernel (Rust, x86 Assembly) GitHub
- Built a bootable Rust `no_std` kernel with an x86 assembly boot path, page-table setup, long-mode transition, interrupt handling, allocator setup, and VGA text output.

EDUCATION

INTELI (Institute of Technology and Leadership) São Paulo, SP
Bachelor of Computer Engineering Expected Dec 2026
